Education

Karabük University

Bachelor of Science in Computer Engineering (GPA: 3.09 / 4.00)

Sep. 2024 – Present

Karabük, Turkey

Ministry of Youth and Sports

10th Annual Engineering Winter Camp (Thematic Training)

Jan. 2026

Turkey

Technical Skills

Languages: Java, TypeScript, JavaScript, HTML, CSS, PHP, Go, SQL, C, Python

Frameworks/Technologies: React Native, Expo, Firebase (Realtime DB), REST API, Godot Engine, Gradio

AI/ML: RAG (Retrieval-Augmented Generation) pipelines, Microsoft Foundry Local, LLM integration (Phi-3.5, Qwen3-Embedding), OpenAI API

Operating Systems: Linux (Ubuntu, Kali Linux), Windows, iOS

Systems & Tools: Git, GitHub, VirtualBox, Linux CLI, Self-Hosted Server Administration, Adobe Animate, Altium Designer

Engineering Tools: OpenRocket (Simulation), Avionics Communication Protocols

Experience

Tepe Kurumsal (Bilkent Holding)

June 29 – July 27, 2026

Hardware Intern, IT Department

Ankara, Turkey

- Worked within the IT department on hardware operations and infrastructure support across the holding.
- Studied Bilkent Holding's server architecture in practice and built a personal server to replicate and internalize its working principles.

Microsoft

June 29 – July 24, 2026

AI Development Intern

Turkey

- Contributed to artificial intelligence development work during a parallel-track internship alongside the Tepe Kurumsal hardware internship.

Work and Travel USA (Virginia)

Summer 2025

Cultural Exchange Program

USA

- Successfully completed a 4-month cultural exchange program, enhancing verbal English proficiency and global adaptability in a professional US-based environment.

Projects & Competition Teams (TEKNOFEST)

IT Support Assistant (Offline RAG System) | Python, Foundry Local, Phi-3.5, Qwen3-Embedding, Gradio

2026

- Built a fully offline, on-device IT helpdesk assistant using Microsoft Foundry Local, combining an extractive-generation hybrid RAG architecture to keep instructions faithful to source documents while a small LLM (Phi-3.5-mini) only generates low-risk lead-in sentences.
- Implemented custom retrieval and cosine-similarity threshold logic in NumPy/SQLite over 5 real IT knowledge documents (Active Directory, VPN, Linux servers, hardware, printers), served through a custom-themed Gradio interface.

Article Summarization Assistant (Online RAG System) | Python, RAG, OpenAI API

2026

- Applied the same retrieval + extractive-generation RAG architecture as the IT Support Assistant to a cloud-connected article summarization tool.

Personal Server Infrastructure | Linux, Self-Hosting

2026

- Set up and administered a personal server during the Tepe Kurumsal internship to study and internalize Bilkent Holding's enterprise server architecture.

Mali Günlük Pro (Expense Tracker) | Java (Swing), React Native, Firebase

2026

- Built a cross-platform finance system with real-time sync using Firebase and RESTful architecture.
- Implemented secure user authentication and data visualization for expense analysis.

ShareNote (AI-Powered Web App) | TypeScript, Firebase, OpenAI API

2025

- Developed a collaborative platform for note-sharing with automated AI summarization features.
- Led a team of 6, managing task distribution and Git version control workflows.

Hicaz Hyperloop Team | *Avionics and Communication Specialist, Karabük University*

– Developing algorithms to process high-speed sensor data for real-time telemetry systems.

– Working on low-latency communication protocols between the capsule and ground control stations.

Oct. 2025 – Present

PUHU Satellite Team | *Software Team Lead & AI Integration, Karabük University*

– Leading the software management for the "Mobile Satellite Terminal" project.

– Integrating AI-driven data processing units for autonomous signal optimization.

Nov. 2025 – Present

GEPTEK Rocket Team | *Simulation Lead, Karabük University*

– Conducted flight simulations using **OpenRocket** to analyze stability and parachute deployment for mid-altitude rockets.

– Optimized rocket aerodynamic parameters to achieve targeted apogee with precision.

Sep. 2025 – Jan. 2026

GEPTEK (Gelişim, Proje ve Teknoloji Kulübü) | *Founding President, Karabük University*

– Coordinating technical visits to major defense industry hubs like **Teknopark Istanbul** and **TUBITAK**.

– Managing a network of engineering students to foster collaborative R&D projects.

2025 – 2026

Leadership & Mentorship

TÜBİTAK Deneyap

Mentor

– Mentoring students for 5 months within the TÜBİTAK Deneyap program.

Mar. 2026 – Present

Turkey

Certifications

- Savunma Sanayi Sistemleri: Kariyer ve Yetkinlik Hamlesi — kapsül+ (Feb–Mar 2026)
- Altium Designer: PCB / Chip Design Certification
- Ford Otosan: Kariyer ve Gelişim Haftası Başarı Sertifikası (Apr 2026)
- BTK Akademi: Version Control (Git & GitHub) — Adobe Animate Production (30 Hours) — Gamma
- Udemy: Artificial Intelligence and ChatGPT Mastery Training
- Career Summit '25: Certificate of Participation (BTK-ICT)
